1:1 Gesture driven prototyping to nail native feel helps sharing a vision with engineers. Its also the most salient application of my design and HCI background. The nuances and details in moments like the first time a user does something versus the 100th are some of my favorite to think about.

**Hi Fi explorations to  
define every state**

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 12.5 million, and the number of people aged 75 and over has increased from 4.5 million to 6.5 million (Office for National Statistics 2000).

There is a growing awareness of the need to address the needs of older people, and the importance of the role of the family in supporting older people. The Department of Health (1999) has identified the need to develop a 'new paradigm' for the care of older people, which is based on the principles of 'person-centred care' and 'active ageing'.

The 'new paradigm' for the care of older people is based on the principles of 'person-centred care' and 'active ageing'. 'Person-centred care' is a approach to care that focuses on the individual needs and preferences of the patient, and 'active ageing' is a approach to care that focuses on the physical, mental and social well-being of the patient.

# Hi Fi explorations to define every state

1:1 Gesture driven prototyping to nail native feel helps sharing a vision with engineers. Its also the most salient application of my design and HCI background. The nuances and details in moments like the first time a user does something versus the 100th are some of my favorite to think about.

# Customizing UI with context

Opt-in sections of the app update navigation to make most of space and user attention. Here I designed for multiple user types within the same app using a modal tool bar.
