

Organizational interaction design at Nat Geo

After joining Nat Geo, I trained up a team of 5 to handle research and design tasks. I also spend my time facilitating project intake, distribution of UX artifacts, and collaboration with other teams to evangelize our work. Wider communication for project learnings get distributed through a monthly newsletter I encourage all team members to contribute to.

In the end its always about communication.

Happy December, UX Newsletter subscribers. The most clicked link from last month's newsletter was to a user test video, which leads me to this month's header image: a user test of an article on mobile that was originally published in print. We tested it to see how much interaction the video content received and how we should update the design in response. Six users were tested (3 on mobile) and all reacted positively to the video content, however only one person immediately found the videos. On desktop the videos were found more quickly because a play button appeared when users hovered their mouse over the image, but since there is no mouse on mobile discovery was serendipitous. Furthermore, because the test asked subjects to identify their favorite part of the page there was likely more interaction than what would occur organically.

In other user experience goings on the team that meets to discuss premium content for paying members have identified some low cost offerings (in terms of development and human-hours to produce). The hope being, to make our digital subscription as valuable as the print one. A lofty goal, but as Ellen Johnson Sirleaf, the first female president of an African nation, said in her memoir "If your dreams do not scare you, they are not big enough."

- *Plan to proceed:* We identified another player (Omnivert) that supports Safari however there are security and advertising issues.
- *What's needed to proceed:* With no good option for a player on our O&O, we are going to continue publishing VFW360 content to Facebook.

Interactive Audible Sponsorship

From Lauren Glazer

Based on our popular [24 hours Around the World](#) article, Audible approached us and requested a similar treatment for a new piece titled, [12 Books Around the World](#). In addition to imagery, our new challenge was to incorporate video, audio and ad units throughout the piece.

- *What we learned:* How to customize an HTML5 audio player! Instead of using the default interface, we wanted to provide our users with a seamless brand experience. In order to do so, we needed to rebuild the

Happy April UX Newsletter subscribers. The cover image for this month shows two experiments set to run soon for ng.com articles. Each seeking to design a page that leads to more interaction with our news articles (and thus more ad impressions) for the large amount of traffic we get from social, directly to a single article.

Each page above show the same article (ads intact to reflect the experience today) however one set of pages has been truncated using a special layout component built into our content management system, AEM. To reveal the full article beyond the truncated portion a user must click a button labeled READ MORE to expand the page beyond the first few paragraphs. Why make more work to read, you ask? Our analytics show that the majority of people do not scroll down beyond the 30% mark of our page height, missing most of the article and any related article promos. This first experiment tests whether showing more Nat Geo articles (located toward the bottom of all article pages) sooner will capture the attention of that group of users who aren't scrolling to read the entire piece.

For fans of Hocus-Focus/spot the difference, can you see the second experiment? On the right set of pages you can see a large image of a horse. This is actually another article that readers may click through to, however it sits in a slideshow with other articles. This experiment is trying to take advantage of known behavior exhibited in image galleries across our site, where users continuously click to see more images. This is a testament to the quality of Nat Geo photography.

It's also worth noting other tech and product teams are working to make page load snappier to reduce a different possible reason for the low scroll through of pages.

UX Team of the Month

Our team is excited to be the first team to have a dedicated team and a dedicated team of users who are fully dedicated to our mission.

Users expect to interact with a dedicated team in the context of their choice, and they want the experience to be a dedicated team. We want to create a dedicated team of users who are fully dedicated to our mission.

1. User's top level
2. User's top level
3. User's top level
4. User's top level
